

# NVMonitor

## Continuous Audit

# NetVision

## Key Benefits

### Relevant

Detailed event filtering enables extremely relevant, streamlined results.

### Immediate

Real-time event processing enables immediate alerts & automated remediation.

### Simple

Easy to use policy interface and reporting console require no in-depth training or prerequisite knowledge.

### Flexible Reporting

Separation of data and display enables limitless report customizations with scheduled exports and emailing of reports.

### Flexible Event Response

Events may trigger an audit trail, external process, email alert, or remediation task for a virtually unlimited set of potential event responses.

## Platforms

Microsoft Active Directory

Microsoft Windows

Microsoft Exchange

Novell eDirectory

Novell Open Enterprise Server  
(SUSE Linux)

Novell NetWare

## Real-Time. Targeted event response.

One of NetVision's core capabilities is real-time monitoring of accounts & groups, access rights, administrative changes, and user activity. Data is collected directly from the source for immutable, non-repudiable, and comprehensive audit trails. And events are analyzed and filtered in real time to ensure extremely high relevance in reports and only appropriate event response.

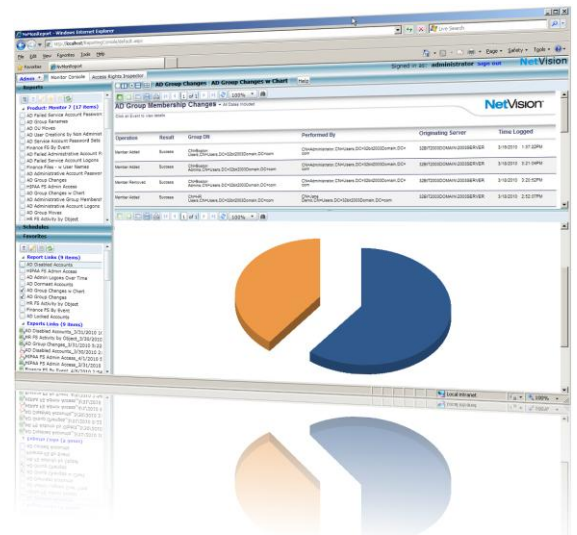

A few of NVMonitor's events include:

- ✓ User Authentication Attempts
- ✓ User Account Changes
- ✓ Security Group Changes
- ✓ File or Folder Access Attempts
- ✓ File or Folder Moves & Changes
- ✓ File or Folder Permission Changes
- ✓ Email Mailbox Access
- ✓ Email Message, Task, or Calendar Changes

NVMonitor provides extremely powerful and flexible tools to specify which events are important to your organization as well as built-in best-practice policies and reports to get you started.

### Immediate Response

As events are processed and matched to business rules, NetVision takes action by capturing events, sending alerts, or remediating events.
